## MANUFACTURER'S REPRESENTATIVE AND STOCKING DISTRIBUTOR

**Rotork Controls** – Electric actuators for quarter turn and multi-turn valves featuring IQ non-intrusive intelligent technology and a built-in data logger for troubleshooting. Most digital communication protocols available.

**Rotork Process Controls** – Electric actuators designed for rotary and linear control valves and dampers. **New!** CVA linear and quarter turn *failsafe* electric actuators for on/off and continuously modulating applications.

**Rotork Fluid Systems** – Pneumatic rack & pinion, scotch-yoke, high pressure gas, electro-hydraulic actuators for linear and rotary applications.

K-Tek offers a wide variety of technologies for LIQUID and DRY product level measurement applications. Magnetic liquid level indicators, Magnetostrictive level transmitters, Ultrasonic level transmitters, RF capacitance/vibrating tuning fork/thermal dispersion flow and level switches, Guided Wave Radar for total level and interface, Sureshot Laser. **NEW!** Lasermeter 2D & 3D laser scanner for non-contact volumetric and mass calculations.

Ultrasonic flow meters, Transit-time and Doppler models, permanent and portable mount, Fusion hybrid flow meter. **NEW!** TFX Ultra Transit-time flow and BTU energy meter.

**CATA-DYNE** Catalytic heaters fueled by natural gas or propane for building heating, freeze prevention, instrument gas pre-heaters, FM approved Class 1 Div. 1. **NEW!** Cata-Dyne LS series “liquid start” catalytic heaters, start in 5 minutes, no power required. **NEW!** Cata-Dyne Line Heaters used prior to high pressure cuts to prevent hydrate formation. **NEW!** Cata-Dyne fuel gas conditioning systems for gas turbines, burners, furnaces, and combined cycle power plants. **NORSEMAN** Explosion proof electric heaters. **RUFFNECK** Industrial heavy duty steam and electric explosion proof heaters. **CALORITECH** Immersion heaters and engineered products, circulation heaters, liquid heat transfer systems, control panel and enclosure heaters.

**GENIE MEMBRANE FILTERS** to protect gas chromatographs and other analyzers from liquids. Genie probe regulators with built-in membrane filters, Avenger coalescing filters, Glysorb glycol vapor filters. **NEW!** Direct Drive adjustable length membrane tip probes that can be inserted and extracted from a pressurized line through a full opening valve without the use of special insertion devices.

Complete line of shell & tube, U Tube, Brazed Plate and air-cooled heat exchangers for new applications and interchangeable replacement products for other manufacturers. Many models off the shelf or one week delivery.

**NEW!** Sur-Flo turbine meters with patented paddle style rotors solve typical turbine meter problems of plugging and impeller breakage. **NEW!** Control Valves for back pressure, pressure reduction, flow control, and compressor suction/bypass applications. Sur-Flo control valves feature a unique axial flow design that offers quick recovery, as well as reduced cavitation, noise, and hunting. Non-venting capability, quickly field repairable. **NEW!** Roto-Boss multi-port orifice meter fitting is a fluid metering device designed to give operators the ability to select and change orifice plates relative to the flow velocity without interrupting or having to stop the flow of fluids in the pipe.

Factory new control valves interchangeable with Fisher\* ET, ED, EZ, D body, V-Balls, 4150 controllers, 630 regulators and valve trims. Pneumatic and electric chemical pumps.

Heat transfer products for electric and fluid tracing systems that transform inefficient convective heat transfer to high efficiency convective heat transfer.

Solenoid Valves, Valve Automation, Valve Monitoring Systems, Transducers.

Certified reference cal-gas standards for gas and liquid analysis, sulfur, mercaptans, and specialty gases. With a complete line of accessories including cylinders, regulators, and heating blankets.
